

Intake Direccion

Beginner-friendly new client setup packet for Notifica IA

Use this PDF when a new client starts. The goal is simple: collect every piece of information once, put it in the right place, and confirm the account is ready before the team starts creating roles, diligencias, estampos, recibos, and reports.

Best order: create or confirm the office account first, then load master data, then test one complete case from demanda to recibo.

Fast Setup Map

Step	What you are doing	Where in the app
1	Create/confirm the client office and users.	Account/admin setup; users belong to one Office.
2	Load the catalogs the client will select from later.	Ajustes de Oficina: Materias, Abogados, Bancos, Procuradores, Tribunales, Comunas, Diligencias.
3	Configure templates, PDFs, and money rules.	Ajustes de Oficina: Estampos; Bancos > Aranceles; Recibos email template from Recibos send preview.
4	Enter a sample demanda and role.	Demandas > Nueva, then the role workspace.
5	Create a test diligencia, generate documents/recibo, and verify reports.	Role workspace, Recibos, Ajustes > Reportes.

Before You Start: Ask These Questions

- [] Who is the main admin for this client, and which email will they use to sign in?
- [] What exact office/receptor name should appear on generated documents and receipts?
- [] Which banks, abogados, procuradores, tribunales, comunas, and diligencia types do they use every week?
- [] Do different banks or abogados have different arancel amounts?
- [] Who receives monthly/daily audit or billing reports?
- [] Which email account will send recibos, and who should receive replies?

1. Client Account And Office

This is the foundation. In the database, users are attached to an Office. If the office or user is wrong, every record created later can end up under the wrong client.

Info to collect	Why it matters	Where to put it
Office / client display name	Used to separate the client office and label their records.	Office.nombre and User.officeName. Confirm exact spelling.
Admin user email	Needed for login, audit reports, and accountability.	User.email. Set isOfficeAdmin when they should manage reports/settings.
Active users list	Controls who can work inside that client account.	Users for the same office; mark inactive when access should stop.
Receptor name	Printed on generated estampos/recibos.	Office PDF config fields: pdfReceptorNombre.
Receptor address line	Printed under receptor details on recibos.	Office PDF config fields: pdfReceptorDireccionLinea.
Phone, firma, sello, receipt stamp files	Used in PDFs and official-looking outputs.	Office PDF config/storage fields for telefono, firma, sello, recibo stamp.

Account Readiness Checks

- [] Sign in as the admin user and confirm the dashboard loads.
- [] Open Ajustes de Oficina and confirm the user sees only this client office data.
- [] Generate or preview one PDF later to confirm the receptor name/address look correct.

2. Master Data To Collect

Master data is the reusable information the team will pick from dropdowns. Load it before creating real cases so users are not forced to type around missing options.

Info to collect	Why it matters	Where to put it
Materias	Classifies each demanda by legal matter.	Ajustes de Oficina > Gestionar Materias.
Bancos	Used as clients/creditors and for filtering recibos.	Ajustes de Oficina > Gestionar Bancos. Include cuenta if used.
Abogados	Required when creating a demanda; also links to banks and procuradores.	Ajustes de Oficina > Gestionar Abogados.
Procuradores	Used for assignment, filtering, and recibo/report views.	Ajustes de Oficina > Gestionar Procuradores.
Tribunales	Required for each role/causa.	Ajustes de Oficina > Gestionar Tribunales.
Comunas	Used for ejecutado address and document text.	Ajustes de Oficina > Gestionar Comunas.
Diligencia types	Defines the work types users schedule and complete.	Ajustes de Oficina > Gestionar Diligencias.

3. Relationship Rules

The system depends on relationships. The most important one is Banco -> Abogado -> Procurador. If these are not linked, dropdowns, filters, recibos, and monthly reporting can feel incomplete.

Relationship	Collect from client	Where to enter it
Abogado to Banco	Which abogados work with each bank.	Ajustes > Abogados: select assigned banks. Also visible from bank setup.
Procurador to Abogado	Which procuradores work with which abogados.	Ajustes > Abogados: select procuradores, or Ajustes > Procuradores linking view.
Arancel by Banco	Default fee amount per diligence/stamp category for that bank.	Ajustes > Bancos > Aranceles.
Arancel by Abogado	Overrides when one abogado has different pricing.	Ajustes > Bancos > Aranceles, abogado tab.
Estampo template by workflow	Which document text or wizard template they use.	Ajustes > Estampos.

4. Case Intake Fields

Once setup data exists, the normal case intake becomes straightforward. These are the fields needed when creating a new demanda and starting work.

Info to collect	Why it matters	Where to put it
ROL	Primary case identifier; must be unique inside the office.	Demandas > Nueva: ROL. The app uppercases it.
Tribunal	Needed to create the RolCausa.	Demandas > Nueva: Tribunal dropdown.
Caratula	Case caption/title.	Demandas > Nueva: Caratula. Can default from bank name if useful.
Cuantia	Amount involved in the case.	Demandas > Nueva: Cuantia.
Banco	Filters abogados and drives reporting/receipt grouping.	Demandas > Nueva: Banco selector.
Abogado	Required for the demanda.	Demandas > Nueva: Abogado selector.
Materia	Optional but helpful for reporting and searching.	Demandas > Nueva: Materia selector.
Procurador	Optional assignment if the client uses procuradores.	Demandas > Nueva: Procurador selector.
Ejecutado name/RUT/address/comuna	Required for notices, estampos, and membretes.	Demandas > Nueva: Ejecutados section.

5. Documents, Recibos, And Email

Info to collect	Why it matters	Where to put it
Estampo text/templates	Custom legal wording and required variables.	Ajustes > Estampos. Edit wizard templates before live work.
Firma and sello	Assets that appear in generated PDFs.	Office PDF config/storage fields. Test with one generated document.
Recibo sequence	Next receipt number for the office/year.	DocumentNumberSequence for RECIBO. Confirm before first live receipt if migrating from another system.
Recibo email template	Subject/body used when sending receipt batches.	Recibos page > send preview > Plantilla de correo > Guardar predeterminada.
Sending mailbox	Account/provider used to send recibos.	Environment/mail provider setup: Graph, Gmail, or SMTP depending on deployment.
Reply tracking mailbox	Mailbox monitored for receipt replies.	Recibos health/reply sync setup; verify on Recibos page.

6. Final Go-Live Test

- [] Create one test demanda with real-looking bank, abogado, tribunal, materia, and ejecutado data.
- [] Open the role workspace and schedule one diligencia for the ejecutado.
- [] Generate one estampo/document and confirm the wording, receptor name, firma, sello, and addresses.
- [] Generate one recibo and confirm amount, receipt number, date, and PDF layout.
- [] Open Recibos and confirm the receipt appears in filters by banco, abogado, procurador, and estado.
- [] Preview sending recibos, confirm recipient grouping and email template, then send a test email.
- [] Open Ajustes > Reportes and generate/download one daily or monthly report if the user is an office admin.

7. Handoff Notes

Item	Write notes here
Login/admin owner	
Catalogs still missing	
Arancel exceptions	
PDF/template changes requested	
Email sending/reply status	
Ready for live work?	Yes / No - reason:
